THE PROCUREMENT TEAM

ADDENDUM # 1

DATE: October 20, 2017

FROM: George Eliseo

PROJECT: RFP 2017-001 Request for Pricing – 58 MHU

LOCATION: Mountain View Estates Mobile Home Park 68990 Harrison St. APN 751-280-018

PREVIOUS BID DUE DATE: October 26, 2017 – **NEW BID DUE DATE:** November 9, 2017

The following are clarifications, answers to questions received and/or revisions to the Request for Quotations (RFP 2017-001) for the above project:

1. The Bid due date has been changed from 10/26/2017 to 11/09/2017
2. Question: "Are TUMF Fees required for these units?"
Answer: TUMF Fees are not required for this project.
3. Question: "Can we provide all electric units instead of electric and propane?"
Answer: All electric are acceptable, however the Contractor should confirm beforehand that the park has the required 200 amp service.
4. Question: "Who pays for and provides the electrical connection between the transformer and the individual units?"
Answer: From my research, the electrical service connect and meter set is done by IID at an additional cost. See the attached IID Rate Chart. Contractor should confirm with IID and the park on exact type of service required here.
5. Question: "Who pays for the change from natural gas jet nozzles to propane nozzles since the Dealer is not allowed to do it?"
Answer: Modifications from Natural Gas jet nozzles to Propane by a third party should be figured into cost per unit.
6. Question: "How will we determine if there is adequate water pressure for the fire sprinklers?"
Answer: Adequate water pressure for the fire sprinklers will be the park's responsibility.
7. Question: "Are titles being recorded on these?"
Answer: No recording of title will be required for these units.
8. Question: "Will we need to compact the soil here?"
Answer: No need for compaction on site.

9. Question: "What kind and type of piers can be used here?"
 Answer from the park: Pier sizes from 12 to 20 inch should be acceptable depending on the manufacturer's specifications.
 Answer from FEMA's website: When flood velocities are less than 1 fps, piers can be constructed using unbonded (dry-stacked) concrete blocks or steel piers. When pier foundation systems are used without separate components to resist lateral loads, the piers and footings must be much stronger. They not only have to transfer all imposed loads to the bearing soils, but also must do so in a manner that does not damage the piers and footings or overload the supporting soils.
10. Question: "Will a Mandrel Inspection be required?"
 Answer: A Mandrel Inspection will be required.
11. Question: "Is a front porch required in the MH package?"
 Answer: No front porch is required.
12. Question: "What were the previous permit fees for the last round of installs here?"
 Answer: Permit fees for previous mobile home installs at this park can be found at www.rctlma.org (run final building permits by APN).
13. This Addendum #1 and the original RFP 2017-001 can also be viewed and downloaded at our website: (www.harivco.org).
